VAL RUST 900

Water Based Rust Inhibitor

Val Rust 900 is a unique water based rust inhibitor system to be applied to ferrous metal or non-ferrous metals.

Application can include spraying, brushing or dipping and may follow immediately after a water wash system, or directly after contact with water diluted coolant. Due to the polar nature of Val Rust 900, hard to reach threads and machined surfaces are quickly and easily penetrated to form an even coating. This product is not oil displacing and should not be applied to oily surfaces.

After application, parts should be stored indoors under shelter where they will be protected from rain or direct water contact. Water contact will resolublize the coating and reduce effectiveness.

Cleaning can easily be accomplished by a warm water wash and rinse. Surfaces should be cleaned prior to application of paint or other coating materials to ensure proper adhesion.

Typical Properties:

Color:	Amber
Specific Gravity @ 60°F:	1.02
pH:	8.60
Freeze Point, °F:	25
Odor:	Slight
Pounds Per Gallon:	8.460
